

ROLLEI RWA WETTING AGENT

Rollei RWA is a non-ionic wetting agent used as a final rinse before drying films. It can be used in all manual and machine processes to greatly reduce the risk of drying marks being formed. We recommend using RWC as a final rinse before drying fiber-based prints to provide rapid, even drying and to prevent mold growth.

Dilution 1 + 100 :

1 ml RWA + 999 ml dist. water = 1l working solution
Temp. 20°C / 68°F

AVAILABLE SIZES

250 ml

Because of its chemical formula, a special safety indication is not required. Nevertheless, an responsible usage of the concentrate is strongly recommended. Wear suitable protective clothing and gloves. In case of contact with eyes rinse immediately with plenty of water and seek medical advice. **Keep out of the reach of children.**
