

# ROLLEI RXA FIX ACID

ROLLEI RXA Fix Acid is a non-hardening, easy to use, rapid fixer based on ammonium thiosulphate. RXA is suitable for all black and white films and papers. Depending on the dilution, RXA can be used as a normal or express fixing bath. RXA can be replenished and is therefore suitable for machine processing. For acid-free fixation of fibre-based papers, we recommend the use of Rollei RXN Fix Neutral.
